USER MANUAL
Top Mount, Bottom Mount, Bottom Mount Ice and Water and Single Door models
SAFETY

Congratulations and thank you for choosing our refrigerator/freezer. We are sure you will find your new appliance a pleasure to use. Before you use the appliance, we recommend that you read through the relevant sections of this manual, which provides a description of your appliance and its functions.

To avoid the risks that are always present when you use an electric appliance, it is important that the appliance is installed correctly and that you read the safety instructions carefully to avoid misuse and hazards.

We recommend that you keep this instruction booklet for future reference and pass it on to any future owners.

After unpacking the appliance, please check it is not damaged. If in doubt, do not use the appliance but contact your local customer care centre.

The symbols you will see in this booklet have these meanings:

WARNING
This symbol indicates information concerning your personal safety.

CAUTION
This symbol indicates information on how to avoid damaging the refrigerator.

TIPS & INFORMATION
This symbol indicates tips and information about use of the refrigerator.

ENVIRONMENTAL TIPS
This symbol indicates tips and information about economical and ecological use of the refrigerator.

CONDITIONS OF USE
This appliance is designed and intended to be used in normal domestic applications only.

IMPORTANT SAFETY INSTRUCTIONS

Please read the user manual carefully and store in a handy place for later reference. Pass the user manual on to new owners of the refrigerator.

TIPS & INFORMATION

Important – check for any damages or marks

If you find the refrigerator is damaged or marked, you must report it within 7 days if you wish to claim for damage/marks under the manufacturers warranty. This does not affect your statutory rights.

ENVIRONMENTAL TIPS

Information on disposal for users

Most of the packing materials are recyclable. Please dispose of those materials through your local recycling depot or by placing them in appropriate collection containers.

You may wish to discard this product, please contact your local authorities and ask for the correct method of disposal.

WARNING

When you dispose of your old refrigerators and freezers, remove any doors. Children can suffocate if they get trapped inside.

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

Children should be supervised to ensure that they do not play with the appliance.

Do not use a steam cleaner.

Do not use mechanical devices or other means to accelerate the defrosting process other than those recommended by the manufacturer.

Keep ventilation openings in the appliance enclosure clear of obstruction.

R600a refrigerator warning

This appliance contains a small quantity of flammable R600a refrigerant. Avoid safety hazards by carefully installing, handling, servicing and disposing of this appliance.

Ensure that if the tubing of the refrigerant circuit is not damaged during transportation and installation.

Leaking refrigerant may cause eye injuries or ignite.

The room for installing appliance must be at lease 1m per 8g of refrigerant. The amount of refrigerant in the appliance can be found on the rating plate inside the appliance.

If you are unsure of the refrigerant check the rating plate inside the refrigerator compartment.

It is hazardous for anyone other than an Authorised Service Person to service this appliance. In Queensland Australia the Authorisation Service Person MUST hold a Gas Work Authorisation for hydrocarbon refrigerants to carry out servicing or repairs which involve the removal of covers.

Ensure that the tubing of the refrigerant circuit is not damaged during transportation and installation.

If you are unsure of the refrigerant check the rating plate inside the refrigerator compartment.

It is hazardous for anyone other than an Authorised Service Person to service this appliance. In Queensland Australia the Authorisation Service Person MUST hold a Gas Work Authorisation for hydrocarbon refrigerants to carry out servicing or repairs which involve the removal of covers.

Keep ventilation openings in the appliance enclosure or in the bullied structure, clear of obstruction.
TOP MOUNT (TM) REFRIGERATOR FEATURES

1. Freezer light (where fitted)
2. Freezer air delivery vents
3. Glass freezer shelf
4. Twist & Serve ice cube tray and bin
5. Freezer air return vents
6. Refrigerator light
7. Manual temperature controls (where fitted, not illustrated)
8. Electronic temperature controls (where fitted, not illustrated)
9. Deli bin
10. Adjustable glass shelves
11. Bottle/wine rack
12. Humidity controls
13. Crisper bins on telescopic extension slides (where fitted)
14. Adjustable rollers
15. Freezer door bins
16. Twin dairy compartments
17. Storesafe™ bin (lockable)
18. Utility drawer
19. Egg tray
20. Adjustable door bins
21. Bottle/can bins
22. Stabilising foot

Features may vary depending on model. Not all models will have features listed.

BOTTOM MOUNT (BM) REFRIGERATOR FEATURES

1. Refrigerator light
2. Electronic temperature controls (Where fitted. Not illustrated)
4. Adjustable glass shelves
5. Bottle/wine rack
6. Humidity controls
7. Crisper bins on telescopic extension slides (where fitted)
8. Freezer storage tray
9. Twist & Serve ice cube tray
10. Ice bucket and scoop (freezer drawer, not illustrated)
11. Freezer drawers on telescopic extension slides (where fitted)
12. Adjustable rollers
13. Twin dairy compartments
14. Storesafe™ bin (lockable)
15. Egg tray
16. Adjustable door bins
17. Bottle/can bins
18. Stabilising foot

Features may vary depending on model. Not all models will have features listed.
BOTTOM MOUNT (BM) ICE & WATER REFRIGERATOR FEATURES

1. LED light
2. Electronic temperature controls
3. Adjustable glass shelves
4. Bottle/wine rack
5. Crisper humidity controls
6. Crisper bins on telescopic extension slides
7. Freezer storage tray
8. Ice maker assembly
9. Freezer drawers on telescopic extension slides (where fitted)
10. Adjustable rollers
11. Stabilising foot
12. Twin dairy compartments
13. Storesafe™ bin (lockable)
14. Egg tray

Features may vary depending on model. Not all models will have features listed.

SINGLE DOOR ALL REFRIGERATOR (AR) FEATURES

1. Refrigerator light
2. Temperature control
3. Adjustable glass shelves
4. Deli bin
5. Bottle holder
6. Humidity control
7. Crisper bin on telescopic extension slides
8. Adjustable rollers
9. Twin dairy compartments
10. Storesafe™ bin (lockable)
11. Egg tray
12. Adjustable door bins
13. Bottle bins
14. Can bin
15. Stabilising foot

Features may vary depending on model. Not all models will have features listed.
SINGLE DOOR ALL FREEZER (AF) FEATURES

- Temperature control
- Freezer light
- Twist & Serve ice cube tray and bin
- Adjustable glass shelves
- Freezer bins on telescopic extension slides
- Adjustable rollers
- Stabilising foot

Features may vary depending on model. Not all models will have features listed.

INSTALLING YOUR NEW APPLIANCE

Adequate ventilation around your refrigerator
The diagram below shows the recommended airspace to allow for ventilation of your refrigerator.
If you do not have a cupboard above the refrigerator with a rear gap of minimum 100 mm (Y), recommended clearance at the top of the refrigerator are as follows:
All models except WBE5160SC
If gap (Y) is not a minimum 100mm, then gap (X) increases from 50mm to 90mm min.
Please note for model WBE5160SC:
If gap (Y) is not a minimum 100mm, then gap (Z) increases from 10mm to 45mm min.

When positioned in a corner area, spacing of at least 350mm on the hinge side will allow the doors to open enough to enable the removal of bins and shelves.

NOTE:
Doors are designed to sit proud of cabinetry (not flush). The clearances shown above are the recommended minimum clearances. The clearance at the rear must not exceed 75mm.

Installing your refrigerator
Your new refrigerator should arrive with the front adjustable rollers wound down, to tilt the top backwards by about 20mm from upright. This will allow your refrigerator door to self-close providing a consistent door seal.

CAUTION

The rollers are designed for forward or backward movement only. They are not castors. Moving the refrigerator sideways may damage your floor and the rollers.
1. Roll the refrigerator into place.
2. The top of the refrigerator should be tilted back by 20mm (see diagram on left). This will allow the doors to self-close providing a consistent door seal.
3. If the refrigerator isn’t tilted back, you can adjust the two front rollers by turning the large, plastic roller nut. One turn of the nut will tilt the refrigerator back approximately 10mm. If you have difficulty turning the roller nut, have someone tilt the refrigerator back, so you have better access. Alternatively, you can access the rollers from the side, using a flat screwdriver. (See diagram below).

4. Check the alignment of the refrigerator to the surrounding cupboards to see if it is level. You can adjust the level with the rollers as detailed in step 3.

5. If you find your refrigerator rocks from corner to corner, it means your floor is uneven. Find a piece of plastic or hardboard etc. and pack it firmly under the roller.
6. On certain floor surfaces the refrigerator may roll forward during operation. Where provided a ‘Roller Stop’ can be placed under the front rollers. If Roller Stop is required, contact customer service on 1300 363 640.

7. You may now need to fine-tune the installation by repeating Steps 3, 4 and 5.
INSTALLING YOUR NEW APPLIANCE

8. When you have the appliance in its final position, it needs to be stabilised. Wind the stability foot down to the floor until it just makes contact with the floor. Lift the front of the appliance to take the weight off the stability foot, then turn it ¼ turn further to ensure firm contact with the floor. Whenever you need to move the appliance, be sure to wind the foot back up so that the appliance can roll freely and be sure to reset it when reinstalling.

9. Clean your refrigerator thoroughly following the instructions on page 24 and wipe off any dust that has accumulated during shipping.

10. Plug your refrigerator straight into its own power point to the floor until it just makes contact with the floor. Whenever you need to move the appliance, be sure to wind the foot back up so that the appliance can roll freely and be sure to reset it when reinstalling.

11. Before you put any food in your refrigerator, it’s recommended you leave it on for 2 or 3 hours to check it is running properly.

Congratulations! You have successfully installed your new refrigerator.

INITIAL START-UP

Refrigerators work by transferring heat from the food inside to the outside air. This operation makes the back and sides of the refrigerator (particularly at startup) feel warm—which is normal.

A cooling coil is located behind the rear wall of the freezer section (in top mount, bottom mount and freezer models) and behind the crisper in all refrigerator models. This coil cools and removes moisture from the air inside.

Avoid placing food against the air vents in the refrigerator, as it affects the efficient circulation. If the door is opened frequently, a light frosting will occasionally occur on the freezer’s interior. This is normal and will clear after a few days. If the freezer door is accidentally kept open, a heavy frost will coat the inside walls and should be removed.

Your new refrigerator uses a high-speed compressor, along with other energy-efficient components, which may make unusual sounds. These sounds simply indicate your refrigerator is working how it should. They include:

- Compressor running noises.
- Air movement noise from the small fan motor.
- A gurgling sound, similar to water boiling.
- A popping noise, heard during automatic defrosting; and
- A clicking noise, prior to compressor startup.

Further details can be found on page 25.

TIPS & INFORMATION

• For top-mount refrigerators (where the freezer is on top of the fresh food compartment):
  - Don’t place food forward of the ribs on the freezer floor, as it will keep the door open.

• For bottom-mount refrigerators (where the freezer is below the fresh food compartment), single-door refrigerators and single-door vertical freezers:
  - Ensure all freezer drawers and shelves are pushed back completely to prevent them from keeping the door open.

ICE AND WATER INSTALLATION

WARNING

Connect to potable water supply only.

The external water filter kit

An external water filter and connection kit has been supplied for use with your ice & water refrigerator. The external filter design allows more space within the refrigerator and provides double the life of previous filters. Reducing the cost of replacement.

The filter is designed to significantly reduce chlorine, taste, odour, heavy metals, turbidity (cloudiness) and scale build-up. The included plastic water tube allows quick connection to the filter and is designed for high durability and kink resistance.

This filter is designed only to be used with a potable water supply. It should not be used on water that is micro biologically unsafe or with water of unknown quality. The filter should be replaced every 12 months. Failure to replace the filter when required can affect the function of the ice maker. Service calls caused by a failure to replace the filter are not covered by warranty.

Contents of installation kit

1 x water filter with push fit connections
2 x mounting brackets and screws
4 x 1/4” metal of water tubing
1 x 1/2” tap fitting
2 x clips

Further details can be found on page 25.

TIPS & INFORMATION

• For top-mount refrigerators (where the freezer is on top of the fresh food compartment):
  - Don’t place food forward of the ribs on the freezer floor, as it will keep the door open.

• For bottom-mount refrigerators (where the freezer is below the fresh food compartment), single-door refrigerators and single-door vertical freezers:
  - Ensure all freezer drawers and shelves are pushed back completely to prevent them from keeping the door open.

Please read before beginning installation

The water connection to your ice and water product can be self-installed. It is recommended that you seek advice from a licensed plumber (if necessary) before commencing the installation.

Your warranty may be voided by an incorrect installation.

Water supply and plumbing

A drinkable water supply to suit a 1/2” tap fitting is required adjacent to the refrigerator. It is recommended that a licensed plumber install a new water supply outlet nearer to the appliance should the tubing supplied not be long enough. If it is not recommended that the tubing be extended as this could adversely affect the flow of water to the ice maker or water dispenser.

The water dispenser and automatic ice maker require a drinkable water supply with a pressure range of between 200kPa and 680kPa (30PSI and 100PSI). If the water supply is above 100psi a pressure limiting valve should be installed.

It is recommended that a Noise Reduction Valve also be fitted in the water supply line. This will reduce water hammer and its effects from quick action household taps and fast acting valves on appliances. The refrigerator water valve is pre-fitted with a pushfit connector for inserting the water tube. Where the tap connection is other than 1/2” adapters can be purchased from plumbing supply stores or good hardware stores.

Water filter

Locate the water filter as close as possible to the water supply tap in a vertical position where possible. The filter will need to be replaced every 12 months to prevent excess filtered micro-organism build-up, and thus ensure continuous purified water and ice supply for you and your family. Replacement water filters are available from Electrolux Home Products Spare Parts Centres and can be posted to you for your convenience (refer to back page for contact details).

CAUTION

If the appliance is not connected to a water supply, ensure that the ice maker is switched off (refer to STEP 1 overleaf). If you do not do this a loud buzzing noise will be heard intermittently. The new hose-sets supplied with the appliance must be used and old hose-sets should not be reused. Do not use with water that is microbiologically unsafe or with water of unknown quality without adequate disinfection. Never connect the appliance to a hot water supply. Never install the water filter in an area of the wall where there may be electrical wires and/or water supply pipes.
ICE AND WATER INSTALLATION

Never install the water filter in an area of direct sunlight.
Check for water leaks at all water connection points in the first 2 to 3 hours after installation, and correct it in case of any water leak. Recheck after 24 hours; if leak still occurs, it is recommended to contact a licensed plumber for advice.
Water is to be connected as per diagram below.

Step 1.
Ensure that the ice maker and water dispenser are switched OFF.

Step 2.
Disconnect refrigerator from power supply.

Step 3.
Connect tap fitting to water supply tap. Tap must be close to the refrigerator.

Step 4.
Install brackets for filter close to tap. Plan to leave as much tubing as possible behind the refrigerator to enable it to be moved easily for cleaning or service.

Step 5.
Write date on filter. The filter will need to be replaced every 12 months.

Step 6.
Extend the collar and clip a circlip around the collar at both ends of the filter.

CAUTION
Do not screw the brackets into the refrigerator as this may void your warranty and permanently damage the refrigerator.

Step 7.
Fit filter to brackets with water flow arrow pointing up.

Step 8.
Push shorter tube into tap fitting past insertion mark.

Step 9.
Push other end into filter INLET.

Step 10.
Connect remaining tube length into filter OUTLET.

Step 11.
Connect other end of remaining tube length to inlet on bottom right hand side of refrigerator.

Step 12.
Turn on water and check all joints and tubes for leaks.

Step 13.
Reconnect the power.

Step 14.
Move the refrigerator back into place being careful not to kink or split the tubing.

INITIAL START-UP

Step 7.
Fit filter to brackets with water flow arrow pointing up.

Step 8.
Push shorter tube into tap fitting past insertion mark.

Step 9.
Push other end into filter INLET.

Step 10.
Connect remaining tube length into filter OUTLET.

Step 11.
Connect other end of remaining tube length to inlet on bottom right hand side of refrigerator.

Step 12.
Turn on water and check all joints and tubes for leaks.

Step 13.
Reconnect the power.

Step 14.
Move the refrigerator back into place being careful not to kink or split the tubing.
INSTALLING YOUR NEW APPLIANCE

Step 15.
Using a large container run the water dispenser to clear air from lines. This may take a few minutes. Purge and dispense a minimum of 2 litres of water. Initial water may be black in colour. This is residual carbon dust from the filter and is non-toxic. If the water is slow to shut off or the dispenser is dripping, air may still be in the lines. Either purge more water through the system to remove this air or allow some time for the air to be removed over subsequent dispensing.

Step 16.
Switch ON Ice Maker.

Step 17.
After 24 hours remove ice bin and dispose of first few batches of ice to ensure that impurities have been flushed from the system.

TIPS & INFORMATION

• Ensure that taps are turned off when replacing and fitting filters. Remember to turn the taps back on when filter fitting is complete.
• Always fit filter as per manufacturer’s instructions, paying special attention to water flow direction.
• If you need to replace water tube, only use approved water quality piping that meets the pressure requirements.
• Do not allow the water tubing to become kinked or trapped under the refrigerator when moving the refrigerator back into position.
• Make sure your refrigerator is level to avoid uneven ice cubes.
• After installation, run the water dispenser for a few minutes to remove carbon dust and to ensure that all air bubbles have been purged from the tubing. Dripping may occur if air bubbles remain in the tube.
• Replace filter at suggested intervals to avoid water/ice reduction and irregularities in taste.
• Remove and clean ice bin once a month, discarding unused ice cubes. This will ensure fresh, clean ice and smooth operation of your ice maker.
• Clean and empty the dispenser drip tray regularly to avoid overflow.
• As the water cut off is not instant, leave glass under dispenser briefly until water has stopped flowing to avoid spills.

WARNING

If you have not used the dispenser for some time discard the first seven or eight cups of water and any ice that the ice maker produces in the first 24 hours (contaminants could have settled in the water pipes).

USING YOUR ELECTRONIC CONTROLS - ICE & WATER MODELS

The electronic display panel consists of an LCD display with blue backlighting. When the power is first turned on, the display, with backlighting, will activate. If no buttons have been pressed and the fridge door is closed, the backlighting will turn off after 30 seconds.

Changing the refrigerator temperature

Press the Fridge/freezer button until the food compartment is illuminated on the refrigerator icon. Use the ‘-’ and ‘+’ buttons to the left and right of the display to select a lower or higher temperature in 1°C steps. Once 0°C is reached, the display will return to 3°C with the next press of the button.

Freezer temperature alarm

If the alarm sounds for no apparent reason, check whether anything is keeping the door open. If the freezer becomes too warm due to the freezer door being left open or warm food being placed too close to the temperature sensor, a buzzer will sound. If the freezer temperature alarm sounds, press any button to disable the alarm. Make sure nothing is holding the freezer door open and move any warm food away from the temperature sensor. If the freezer is still too warm after 30 minutes, the alarm will sound again, indicating that something may be wrong with the refrigerator.

NOTE: The freezer temperature alarm can be reset for 12 hours by holding the alarm reset button continuously for 10 seconds.

Controlling the temperature

We recommend that when you start your refrigerator for the first time, the temperature for the refrigerator is set to 3°C and the freezer to -18°C. If you want to change the temperature, follow the instructions below. Make only small adjustments and wait 24 hours to see if it’s correct. Checking the softness of ice cream is a good indication if your freezer is the right temperature, while feeling the coldness of water kept in the refrigerator is a good way of checking the temperature of the food compartment.

NOTE: When you set a temperature, you set an average temperature for the whole refrigerator cabinet. Temperatures inside each compartment may vary, depending on how much food you store and where you place it. High or low room temperature may also affect the actual temperature inside the refrigerator. If no button has been pressed for some time there may be a delay of up to 2 seconds before the display responds, this is normal and is a part of the display design to reduce the chance of accidental changes.

Changing the freezer temperature

Press the Fridge/freezer button until the freezer compartment is illuminated on the refrigerator icon. Use the ‘-’ and ‘+’ buttons to the left and right of the display to select a lower or higher temperature in 1°C steps. Once the maximum of -23°C is reached, the display will return to -14°C with the next press of the button.

NOTE: The freezer temperature alarm can be reset for 12 hours by holding the alarm reset button continuously for 10 seconds.

Checking the softness of ice cream

Checking the softness of ice cream is a good indication if your freezer is the right temperature.

Shopping function

Use the Shopping function when you add a large amount of food to the fridge compartment. To use this function, press the Modes button until Shopping is illuminated. The Shopping function chills the food quickly but does not affect the temperature in the freezer compartment. The Shopping function will operate for 90 minutes before automatically returning to normal operation. If you want to turn the Shopping function off before 90 minutes have passed, simply press the Modes button again until the Shopping icon disappears and the refrigerator will return to normal operation.

NOTE: The freezer temperature alarm can be reset for 12 hours by holding the alarm reset button continuously for 10 seconds.

Press the Fridge/freezer button until the food compartment is illuminated on the refrigerator icon. Use the ‘-’ and ‘+’ buttons to the left and right of the display to select a lower or higher temperature in 1°C steps. Once 0°C is reached, the display will return to 3°C with the next press of the button.

NOTE: The freezer temperature alarm can be reset for 12 hours by holding the alarm reset button continuously for 10 seconds.
Using your electronic controls - ice & water models

Door alarm
If the fridge or freezer door is left open for more than two minutes, the alarm will buzz and the refrigerator icon in the centre of the display will flash indicating which door is open. If you want to leave the door open while you load the refrigerator, you can turn the alarm off for 8 minutes by pressing any button, note that the icon will continue to flash until the door is closed.
If the fridge door is left open for more than 30 minutes, the light will automatically turn off to save energy. To turn the light back on simply close and reopen the door again.

Display lock
Press and hold the Display Lock button for 3 seconds to activate the display lock. This will disable the display to prevent accidental changes to settings. To turn the display lock off, hold the Display Lock button for 3 seconds.

Drinks chill timer
The drinks chill timer is used to quickly chill a bottle. Place the bottle in the freezer and the timer can be set for a minimum of 5 minutes to a maximum of 30 minutes. To set, simply press the drinks chill button and an initial time of 20 minutes appears. To adjust the timer use the ‘-’ and ‘+’ buttons to the left and right of the display to a maximum of 30 minutes or a minimum of 5 minutes in 5 minute steps. Once set, a time will count down one minute at a time. You can change the time or turn the timer off even after the countdown has started. A buzzer will tell you when the time is finished and the icon will flash until the alarm reset button is pressed.
If your drink is not cold enough, reset the drinks chill function (remembering the drink is already partially chilled) suggested chilling times:
- 10 minutes for cans of drink
- 20 minutes for bottles of wine
- 30 minutes for bottles of soft drink.

Energy efficiency
Your refrigerator has been designed to be energy-efficient and can operate in three modes: Normal, Eco and Holiday.

- Eco mode
Eco mode is the default mode of your refrigerator. The leaf icon will automatically appear on the electronic display when your refrigerator is operating in Eco mode.
- Normal mode
Normal mode is used when you require extra cooling or when the refrigerator door is opened more than usual. The leaf symbol will disappear from the electronic display when the refrigerator is operating in normal mode.
- Holiday mode

Quick freeze
The quick freeze mode allows for increased production of ice, which is useful for entertaining. To use this function, press the Modes button until Quick freeze is illuminated. The Quick freeze function will now operate for 12 hours. If you want to turn the Quick freeze off before 12 hours have passed, simply press the Modes button again until the Quick freeze icon disappears and the refrigerator will return to normal operation.

Sabbath mode
Entering Sabbath mode will disable all the refrigerator lighting, turn off the ice maker, water dispenser and prevent any other electrical activity from occurring as a result of the refrigerator doors being opened.
To enter Sabbath Mode press and hold the ‘Display lock’ and ‘-’ buttons simultaneously for 3 seconds. Four beeps will sound and the display will show ‘sb’ to indicate Sabbath Mode.
All alarm functions are disabled except for the High Temperature Alarm for reasons of food safety. If there is a high temperature issue during this period the alarm will sound intermittently for 10 minutes then turn off on its own.
To exit Sabbath Mode press and hold the ‘Display lock’ and ‘-’ buttons simultaneously for 3 seconds. Four beeps will sound and the refrigerator will resume normal operation.

Disabling and enabling ice maker and water dispenser
To disable the automatic ice maker, press the Ice & Water On/Off button until the ice maker off icon is illuminated. Press the button once more to disable the water dispenser, a water off icon will now be displayed. To disable both ice and water dispensers, press the button until both ice maker off and Water off icons are displayed. Press the button once more to enable both ice and water dispensers.

Filter replacement
Your refrigerator is fitted with a water filter which periodically requires replacement. When your filter requires replacement, Order filter and Replace filter icons will appear as a reminder to both order and replace the water filter. When the replace filter icon appears an alarm will sound, pressing any button on the user interface will mute this alarm for one week.
When the filter has been replaced press and hold the ‘Ice and Water’ button for three seconds to reset the filter replace timer.

Other special refrigerator features
- Independent control of the compressor and fan to provide the best performance.
- Extra cooling depending on the number of times the door is opened.
- Automatically adjusts defrost time when the door is not frequently opened.

NOTE: Display malfunctions may be due to brief power supply interruptions. If this occurs, turn the refrigerator off at the power point and wait 5 minutes. The refrigerator pressure will need time to equalise before you turn the refrigerator on again.
Changing the light bulb
Press and hold the Display Lock button for 3 seconds to activate the display lock. This will disable the display to prevent accidental changes to settings. To turn the display lock off, hold the Display Lock button for 3 seconds.

Filter replacement
Your refrigerator is fitted with a water filter which periodically requires replacement. When your filter requires replacement, Order filter and Replace filter icons will appear as a reminder to both order and replace the water filter. When the replace filter icon appears an alarm will sound, pressing any button on the user interface will mute this alarm for one week.
When the filter has been replaced press and hold the ‘Ice and Water’ button for three seconds to reset the filter replace timer.

Other special refrigerator features
- Independent control of the compressor and fan to provide the best performance.
- Extra cooling depending on the number of times the door is opened.
- Automatically adjusts defrost time when the door is not frequently opened.

NOTE: Display malfunctions may be due to brief power supply interruptions. If this occurs, turn the refrigerator off at the power point and wait 5 minutes. The refrigerator pressure will need time to equalise before you turn the refrigerator on again.
Changing the light bulb
Controlling the temperature
The default temperature for the refrigerator is 3°C and -18°C for the freezer. If you want to change the temperature, follow the instructions below. Make only small adjustments and wait 24 hours to see if it’s correct. Checking the softness of ice cream is a good indication if your freezer is the right temperature, while checking the temperature of water kept in the refrigerator is a good way of checking the temperature of the food compartment.

NOTE: When you set a temperature, you set an average temperature for the whole refrigerator cabinet. Temperatures inside each compartment may vary, depending on how much food you store and where you place it. High or low room temperature may also affect the actual temperature inside the refrigerator.

Changing the freezer temperature
Press the freezer button to make the freezer colder in 1°C steps. Once the maximum of -23°C is reached, the display will return to -14°C with the next press of the button. The bar graph gets smaller with colder freezer settings.

Changing the refrigerator temperature
Press the fridge button to make the refrigerator colder in 1°C steps. Once 0°C is reached, the display will return to 7°C with the next button press. The bar graph gets smaller with colder refrigerator settings.

Quick freeze function
Use this function when you add a large amount of food to the freezer compartment. This freezes the food quickly but does not affect the temperature in the refrigerator compartment.

To use this function, press the quick freeze button once. An animated icon will light up. The quick freeze function will now operate for 90 minutes. If you want to turn the quick freeze function off before 90 minutes have passed, simply press the quick freeze button again. The icon will disappear and the freezer will return to normal operation.

Freezer temperature alarm
If the alarm sounds for no apparent reason, check whether anything is keeping the door open. If the freezer becomes too warm due to the freezer door being left open or warm food being placed too close to the temperature sensor, a buzzer will sound. The icon adjacent to the alarm reset button, the freezer set temperature and bar graph will all flash, until the alarm reset button is pressed. Once pressed, the alarm disable icon adjacent to the alarm button will illuminate for 50 minutes, or until the temperature drops to an acceptable level. Make sure nothing is holding the freezer door open and move any warm food away from the temperature sensor. If the freezer is still too warm after 50 minutes, the alarm will sound again, indicating that something may be wrong with the refrigerator.

NOTE: The freezer temperature alarm can be reset for 12 hours by pressing the alarm reset button continuously for 10 seconds.

Door alarm
If the fridge door is left open for more than two minutes, the alarm will buzz and an arrow pointing to an open door will flash, along with the temperature setting and bar graph. If you want to leave the door open while you load the refrigerator, you can turn the alarm off for 8 minutes by pressing the alarm reset button.

DRINKS CHILL
Press and hold the fridge and fridge buttons together to activate the child lock. This will disable the display to prevent accidental changes to settings. To turn the child lock off, press and hold the freezer and fridge buttons together.

Drinks chill timer
The drinks chill timer is used to quickly chill a bottle. Place the bottle in the freezer and the timer can be set for a minimum of 3 minutes to a maximum of 30 minutes. To set, simply press the drinks chill button repeatedly for the number of minutes (in 5-minute intervals). Once set, an animated icon appears beside the drinks chill button, with a timer that counts down one minute at a time. You can change the time or turn the timer off even after the countdown has started. A buzzer will tell you when the time is finished and the icon will flash until the alarm reset button is pressed. If your drink is not cold enough, reset the drinks chill function (remembering the drink is already partially chilled).

Suggested chilling times:
- 10 minutes for cans of drink
- 20 minutes for bottles of wine
- 30 minutes for bottles of soft drink

NOTE: Opening the freezer door won’t affect the operation of either Eco or Holiday modes.

Eco and Holiday Modes minimise defrosting to save energy, while maintaining your temperature settings.

Eco mode
Eco mode can be used if you don’t open your refrigerator door a lot. It is activated in one of two ways:
- by manually pressing the eco/holiday button once in normal mode, or,
- by automatically activating after 30 hours if the refrigerator door has not been opened.

The test icon will appear on the electronic display when eco mode is on. If eco mode is activated automatically, the refrigerator will revert to normal mode once the refrigerator door is opened. If eco mode is entered manually, opening the door will not revert it back to normal mode. To exit eco mode, simply press the eco/holiday button until the word “normal” is displayed.

Use Eco mode when you’re not using the refrigerator all the time (e.g. as a long-term storage refrigerator). If the door is going to be opened a lot, switch back to normal mode. Remember, if eco mode is turned on manually, it won’t switch off automatically.

Holiday mode
Use this button when you go on holiday or leave the house for long periods. The refrigerator minimises defrosting to save energy but maintains your temperature settings. To put the refrigerator into holiday mode, press the eco/holiday mode button until the airplane icon appears. The holiday mode will operate until the button is pressed again or the refrigerator door is opened.

Energy efficiency
Your refrigerator has been designed to be energy-efficient and can operate in three modes: Normal, Eco and Holiday.

Normal mode
Normal mode is used when the refrigerator door is often opened. It’s the default mode of your refrigerator.

Eco mode
Eco mode can be used if you don’t open your refrigerator door a lot. It is activated in one of two ways:
- by manually pressing the eco/holiday button once in normal mode, or,
- by automatically activates after 30 hours if the refrigerator door has not been opened.

The test icon will appear on the electronic display when eco mode is on. If eco mode is activated automatically, the refrigerator will revert to normal mode once the refrigerator door is opened. If eco mode is entered manually, opening the door will not revert it back to normal mode. To exit eco mode, simply press the eco/holiday button until the word “normal” is displayed.

Use Eco mode when you’re not using the refrigerator all the time (e.g. as a long-term storage refrigerator). If the door is going to be opened a lot, switch back to normal mode. Remember, if eco mode is turned on manually, it won’t switch off automatically.

Holiday mode
Use this button when you go on holiday or leave the house for long periods. The refrigerator minimises defrosting to save energy but maintains your temperature settings. To put the refrigerator into holiday mode, press the eco/holiday mode button until the airplane icon appears. The holiday mode will operate until the button is pressed again or the refrigerator door is opened.
**MANUAL CONTROLS**

**MANUAL MODELS**

Controlling the temperature

Only make small temperature adjustments at first and wait 24 hours to see if you need to make any more.

**Top Mount Models**

Use the temperature controls at the rear of the refrigerator compartment. Set refrigerator and freezer controls to MID at startup.

- Adjusting the freezer temperature:
  1. Select the freezer control (top knob or left knob).
  2. Turn clockwise to set colder.
  3. Turn anticlockwise to set less cold.

- Adjusting the refrigerator temperature:
  1. Select the refrigerator control (bottom knob or right knob).
  2. Turn clockwise to set colder.
  3. Turn anticlockwise to set less cold.

**Bottom Mount Models**

Use the temperature controls at the rear of the refrigerator compartment. Set refrigerator and freezer controls to MID at startup.

- Adjusting the refrigerator temperature:
  1. Select the refrigerator control (bottom knob or right knob).
  2. Turn clockwise to set colder.
  3. Turn anticlockwise to set less cold.

Single door all refrigerator models

Use the temperature control at the top of the compartment. Set refrigerator and freezer controls to MID at startup.

- Adjusting the all refrigerator temperature:
  1. Turn clockwise to set colder.
  2. Turn anticlockwise to set less cold.

**Single door all freezer models**

Set the temperature with the temperature control at the rear of the compartment. Set refrigerator control to MID at startup.

- Adjusting the vertical freezer temperature:
  1. Turn clockwise to set colder.
  2. Turn anticlockwise to set less cold.

**USING YOUR APPLIANCE**

This section tells you how to make the most of the many useful features - cleaning instructions can be found on page 24.

Door storage bins

The top mount models, bottom mount freezer model and all refrigerator models are fitted with door storage bins. These bins adjust to meet different storage needs. All the door bins are completely removable for cleaning. If you want to remove or adjust a bin, lift it over the support lugs on the inner door panel. To replace, push the bin down over the support lugs to lock it in place.

Dairy compartment

Use the dairy compartment to store foods like butter, margarine and cheeses. The compartment is slightly warmer than the rest of the refrigerator compartment, while the lid provides protection against odours.

Deli bin (where fitted)

Use the deli bin to store foods like smallgoods, fresh or cooked meat and cheese, or as an additional crisper. The bin will help prevent strong food odours from creeping into the rest of the refrigerator. To remove the deli bin, pull it forward, then lift it up and pull it further forward.

Crisper bin

Use the crisper bin to store vegetables, fruit or smallgoods. Change the humidity by sliding the humidity control.

Storing vegetables

Store vegetables in the crisper bin and remember to set the humidity control to more humid (closed).

Storing fruit & smallgoods

Store fruit and smallgoods in the crisper bin and remember to set the humidity control to less humid (open).

**TIPS & INFORMATION**

The thermostat in the temperature control is affected by altitude. It’s recommended you set it warmer to compensate – eg. at 1000 metres above sea level, set the temperature control to one setting warmer than MID. Checking the softness of ice cream is a good way to check the temperature of the freezer. Also, checking the temperature of water is a good way to check the temperature of the food storage compartment.

**Removal (standard Crisper Bins)**

1. Remove the crisper bin(s) by pulling forward, then up and forward again.
2. Remove the crisper shelf by lifting the catches on the underside of the shelf and pulling the shelf forward.
3. For top mount and bottom mount models, the coldest freezer setting is not recommended in normal or very hot climates. It will limit the cooling to the refrigerator section. In very cold climates (where temperatures are below 10°C) the freezer may need to be set colder.
4. The top mount models, bottom mount freezer model and all refrigerator models are fitted with door storage bins. These bins adjust to meet different storage needs. All the door bins are completely removable for cleaning. If you want to remove or adjust a bin, lift it over the support lugs on the inner door panel. To replace, push the bin down over the support lugs to lock it in place. In very cold climates (where temperatures are below 10°C) the freezer may need to be set colder.
5. In very cold climates (where temperatures are below 10°C) the freezer may need to be set colder.
6. For top mount and bottom mount models, the coldest freezer setting is not recommended in normal or very hot climates. It will limit the cooling to the refrigerator section. In very cold climates (where temperatures are below 10°C) the freezer may need to be set colder.
7. In very cold climates (where temperatures are below 10°C) the freezer may need to be set colder.
8. For top mount and bottom mount models, the coldest freezer setting is not recommended in normal or very hot climates. It will limit the cooling to the refrigerator section. In very cold climates (where temperatures are below 10°C) the freezer may need to be set colder.
9. In very cold climates (where temperatures are below 10°C) the freezer may need to be set colder.
10. For top mount and bottom mount models, the coldest freezer setting is not recommended in normal or very hot climates. It will limit the cooling to the refrigerator section. In very cold climates (where temperatures are below 10°C) the freezer may need to be set colder.

**Removal — easy glide (on telescopic extension slides)**

1. Remove the crisper bin(s) by pulling forward, then up and forward again, lifting the bin off the slides. Push the slides back into the refrigerator.

**CAUTION**

Never close the door while the telescopic slides are extended. It may damage the slide and/or the refrigerator or cause the slide to become disengaged from the refrigerator.

**CAUTION**

Never immerse the cover in water, as this could affect the operation of the slide.

**To refill (see diagram on next page)**

1. With the runners pushed in all the way.
2. Slide the bin into place over the telescopic slides and under the shelf. Push the bin in until it stops, noting that the bin will not be closed all the way.
3. Open the bin to access the finger tabs at the ends on each side of the bin. Use your thumb and forefinger to lift the bin over the end of the slide and clip in place.
4. Fully close the bin.

**Storesafe™ lockable bins (where fitted)**

These bins are designed to store items like cosmetics and medicines. They slide out for easy access. The left hand bin has a lock that is operated by turning the knob located on the fixed area between the bins. This may be turned with a coin. You can remove the Storesafe™ bin(s) for cleaning. Remove the bin by simply pulling past the stop in the runners. You will need to lift the bin while pulling it forward. A small amount of force may be required to overcome the front stop.

**WARNING**

Never store solvents or flammable materials like nail polish remover or lighter fluid inside your refrigerator. They will affect the life of the plastic components and may taint stored food.
USING YOUR APPLIANCE

**SpillSafe™ glass shelves (where fitted)**

SpillSafe™ glass shelves keep spills on the shelf. A shelf retaining system minimises accidental movement of shelves and they can be adjusted to various heights. SpillSafe™ glass shelves are not to be used as slide out shelves. To remove the shelves, gently pull them forward until the shelf comes clear of the shelf guides. To return the shelf, make sure there is nothing behind that may obstruct movement. Gently push the shelf into the cabinet and back into position.

**Freezer drawers**

The bottle holder can be used to store various types of bottles like wine or beer. Bottles should be stored with the bottom end towards the back of the refrigerator. Selected models are supplied with a chrome, full-width wine rack.

**Bottle Holder (where fitted)**

To remove the drawer for cleaning, 1. Empty food from the drawer. 2. Remove the drawer by pulling it forward and lifting the front to unhook it from the slides. Once you have removed the drawer, ensure the slides are pushed back so they are fully closed.

**WARNING**

Never close the door while the telescopic slides are extended. This may damage the slide and/or refrigerator or cause the slide to become disengaged from the refrigerator.

**Freezer drawers**

Freezer drawers are fitted to bottom mount models and single door freezer models. The drawers are mounted on telescopic extension slides, to enable full access to the contents in the drawer. Clear plastic fronts provide easy visibility of contents.

To remove the drawer for cleaning, 1. With the telescopic slides pushed in all the way. 2. Slide the drawer into place over the slides and push the bin in until it stops. The bin will not be closed all the way. 3. Open the bin to access the finger tabs at the ends of the telescopic slides, on each side of the bin. Using your thumb and forefinger, lift the bin over the end of the slide and clip in place. If the drawer is not fully engaged on the slide, it’s possible the drawer won’t stay on the slide if fully extended.

To replace the drawer, 1. With the telescopic slides pushed in all the way. 2. Slide the drawer into place over the slides and push the bin in until it stops. The bin will not be closed all the way. 3. Open the bin to access the finger tabs at the ends of the telescopic slides, on each side of the bin. Using your thumb and forefinger, lift the bin over the end of the slide and clip in place. If the drawer is not fully engaged on the slide, it’s possible the drawer won’t stay on the slide if fully extended.

**Wine rack (where fitted)**

The wine rack can be used to store various types of bottles like wine or beer. Bottles should be stored with the bottom end towards the back of the refrigerator.

**Twist ice & serve (where fitted)**

Some top mount, bottom mount and single door vertical freezer models have a twist ice & serve ice cube tray assembly.

To use, remove the tray, fill with water and place back in the freezer. Once ice has formed (approximately 3 hours) simply twist the knob at the front clockwise until the ice drops into the bin below. A larger bin is provided in some bottom mount models along with an ice scoop.

**CAUTION**

Your refrigerator is fitted with long life LED lighting. In the unlikely event the LED lights should fail, then the LED lights should be serviced by the manufacturer, it’s service agent or similarly qualified technician. Refer to the warranty page for contact details.

When the door is left open for 1.5 minutes, the LED light will dim to 50% brightness to conserve energy and prolong the life of the LED. If the door is left open for a further 1.5 minutes, the light will automatically turn off. Close and reopen the door again to turn the light back on.

**Mounting the twist ice & serve to the other side of the freezer.**

**Note:** this is only possible on Top Mount models.

1. Remove the ice bin and ice cube tray. If the ice tray assembly is frozen to the carriage, simply squeeze the tray and shelf together to break the ice.
2. Before you remove the ice carriage, remember to disengage it from the glass shelf (as shown), as it may result in damage to the assembly.
3. Remove the centre runner by disengaging it at the front of the shelf, and removing it from the rear.
4. Retract the runner in to the rear of the shelf on the right hand side and then engage the front (as shown).
5. Fit the carriage by sliding it into the runners until the front of the carriage engages with the shelf.
6. Retract the ice tray and ice bin.

**LED lighting (where fitted)**

**WARNING**

Never insert your finger into the light bulb socket to check for the presence of the “O” ring.
4. Replace the light cover by hooking the lugs into the slots and pressing up until it clips in.
5. Wait 5 minutes to ensure pressures in the refrigeration system are equalised, before turning the refrigerator on at the power point.

**Changing the freezer light (where fitted)**

1. Switch off the power at the power point and remove the cord by pulling the plug.
2. Carefully unclip the light cover as shown in the pictures.
3. Unscrew the light bulb and replace it with a new bulb of the same type and wattage. If, when you remove the light bulb the small rubber “O” ring comes out with the bulb, fit the “O” ring over the new bulb and screw bulb into the socket (see diagram at bottom of page).

**WARNING**

Never insert your finger into the light bulb socket to check for the presence of the “O” ring.
4. Replace the light cover by hooking the lugs into the slots and pressing up until it clips in.
5. Wait 5 minutes to ensure pressures in the refrigeration system are equalised, before turning the refrigerator on at the power point.

**Changing the refrigerator Light**

1. Switch off the power at the power point and remove the cord by pulling the plug.
2. Carefully unclip the light cover by pulling the light cover tab at the rear, towards you.
3. Unscrew the light bulb and replace it with a new one of the same type and wattage. If, when you remove the light bulb the small rubber “O” ring comes out with the bulb, fit the “O” ring over the new bulb and screw bulb into the socket (see diagram at bottom of page).

**TIPS & INFORMATION**

Ensure the “O” ring is in place before replacing the bulb.

---

**CARE & MAINTENANCE**

**Changing the refrigerator Light**

1. Switch off the power at the power point and remove the cord by pulling the plug.
2. Carefully unclip the light cover as shown in the pictures.
3. Unscrew the light bulb and replace it with a new bulb of the same type and wattage. If, when you remove the light bulb the small rubber “O” ring comes out with the bulb, fit the “O” ring over the new bulb and screw bulb into the socket (see diagram at bottom of page).

**WARNING**

Never insert your finger into the light bulb socket to check for the presence of the “O” ring.
4. Replace the light cover by hooking the lugs into the slots and pressing up until it clips in.
5. Wait 5 minutes to ensure pressures in the refrigeration system are equalised, before turning the refrigerator on at the power point.
GENERAL INFORMATION

Cleaning the refrigerator

WARNING
BEFORE CLEANING: Turn the refrigerator off at the power point and unplug the cord to prevent any chance of electrocuting yourself.

- Doors and exterior (white & pacific silver)
  You should only clean the doors with lukewarm soapy water and a soft cloth.
- Stainless Steel
  Your stainless steel refrigerator is manufactured from mark-resistant stainless steel. This stainless steel has a special advanced protective coating that resists the removal of marks such as fingerprints and water spots. To keep its appearance, clean it regularly with lukewarm soapy water and a soft cloth.

CAUTION
Never use stainless steel cleaners, abrasive pads or other cleaners that will scratch the surface. Damage to the appliance after delivery is not covered by your warranty.

- Interior
  Clean the inside of your refrigerator regularly with a soft cloth, unscented mild soap and lukewarm water. Thoroughly dry all surfaces and removable parts and avoid getting water on the controls. Replace removable parts, plug power cord in and switch the power on before returning the food.
- Door seals
  Always keep door seals clean by washing them with a mild detergent and warm water, followed by a thorough drying. Sticky food and drink can cause seals to stick to the cabinet and tear when you open the door.

CAUTION
Never use hot water, solvents, commercial kitchen cleaners, aerosol cleaners, metal polish or caustic or abrasive cleaners, or scourers to clean your refrigerator. Many commercially available cleaning products and detergents contain solvents that will damage your refrigerator. Use only a soft cloth with an unscented mild soap and lukewarm water.

If your refrigerator has telescopic extension slides, simply wipe them with a damp cloth to clean them and never immerse them in water.

Safety
It is important to use your appliance safely. This means you need to supervise young children and infirm persons when they use it. You need to make sure that young children do not play with the appliance. Follow the tips on next column.

ALWAYS DO THIS
- Check the power point is properly earthed — if you are not sure get an electrician to check it.
- Switch off and unplug the refrigerator at the power point before you clean or move it.
- If the power supply cord is damaged, have it replaced by the manufacturer, service agent or similarly qualified person.

NEVER DO THIS
- Never let children play with the refrigerator.
- Never store spray cans, explosive fluids or flammable liquids in the refrigerator.
- Never store fizzy drinks in the freezer compartment.
- Never lick icy foods when they first come out of the freezer. This can burn your lips and mouth.
- Never try to repair the appliance yourself.
- Never use electric heaters or dryers to defrost the freezer because you can receive an electric shock.
- Never use electrical appliances inside the food storage areas.
- This appliance contains insulation formed with flammable blowing gases. For safety reasons, take care when you dispose of it.
- Do not damage the appliance circuit.

WARNING
When you dispose of your old refrigerator or freezer, remove all doors to prevent children from being trapped inside.

WARNING
R600a refrigerator warning
This appliance contains a small quantity of flammable R600a refrigerator. Avoid safety hazards by carefully installing, handling, servicing and disposing of this appliance.
- Ensure that the tubing of the refrigerator circuit is not damaged during transportation and installation.
- Leaking refrigerant may cause eye injuries or ignite. The room for installing appliance must be at least 1m² per 8g of refrigerant. The amount of refrigerator in the appliance can be found on the rating plate inside the appliance.
- If you are unsure of the refrigerant check the rating plate inside the refrigerator compartment.
- It is hazardous for anyone other than an Authorised Service Person to service this appliance. In Queensland Australia the Authorisation Service Person MUST hold a Gas Work Authorisation for hydrocarbon refrigerants to carry out servicing or repairs which involve the removal of covers.

Switching off your refrigerator
If you switch off your refrigerator for an extended period, follow these steps to reduce the chances of mould:
1. Remove all food.
2. Remove the power plug from the power point.
3. Thoroughly clean and dry the interior.
4. Ensure that all the doors are wedged open slightly for air circulation.

TROUBLESHOOTING

PROBLEM
When the motor seems to run more than expected
When your refrigerator has a large fridge and freezer section it is normal to frequently hear the sound of the motor. However, to keep operation to a minimum check the following:
- Are doors kept open too long or too often?
- Have large amounts of warm food just recently been stored? Summer, festive seasons and holidays usually mean a lot more work for your refrigerator.
- If this day is hot or the room is very warm, the refrigerator will need to run more than normal.

SOLUTION
- The refrigerator will run more that normal just after you install it or when it has been turned off for a long time.

PROBLEM
If the temperature in the refrigerator is too warm

- If there is no frost on the freezer?
- The cabinet is not level.
- The interior may need cleaning.
- Some food produces odours.
- Some containers and wrapping can cause odours.
- Ask yourself ‘if the food started about the same time you started storing something unusual?’

SOLUTION
- Check that the appliance has enough circulation.
- Refer to ‘Controlling the temperature’ on pages 15-20.
- You may have kept the door open too long or too frequently.
- Food containers or packaging may be holding a door open.

PROBLEM
When there is a refrigerator/freeze noise

- Modern refrigerators/freezers with increased storage capacity use high speed compressors. These can provide a seemingly high level of sound which is quite normal. Normal operational sounds include:
  - Occasional gurgling, similar to water boiling.
  - Air flow noise (air circuits because of a small fan).
  - A popping noise heard during automatic defrost.
  - A clicking noise heard just before the compressor starts (this is just the automatic switching action of the temperature control, turning the compressor on or off).
  - Other strange sounds may mean that you need to check and take action. For example, noises may mean that:
    - The cabinet is not level.
    - The floor is uneven or weak.
    - Bottles are badly placed and rattling.
    - There is ice formation from an object on top of or behind or beside the refrigerator.
    - The back of the refrigerator cabinet is touching the wall.

SOLUTION
- Make sure you fully close the freezer and fridge doors. If the doors are left open, a heavy frost will coat the inside of the freezer. If it develops, remove it and take care to properly close the doors.
- If water drips on the floor?
  - The defrost water tray (located at the back or underneath of the cabinet) may not be properly positioned, or the drain tube may be incorrectly positioned to direct water into this tray. You may need to pull the refrigerator away from the wall to check this tray and tube.
- Fridge does not exist vacation mode
  - Turn appliance off at the power point. Leave off for these 3 minutes for the memory to clear, then turn back on.
  - In normal operation, the fridge transmits heat from inside to outside of this cabinet. It is normal for the side and rear of the fridge to feel warm/hot while operating. This will be more noticeable during start up and hot ambient conditions.

IF YOU STILL REQUIRE SERVICE
If you have a problem, and the problem persists after you have made the checks mentioned above, contact your nearest approved Service Centre or the dealer you bought the refrigerator from. Be ready to quote the model number, 9-digit PNC and 8-digit serial number, which is stated on the label inside the refrigerator compartment.
ICE + WATER TROUBLESHOOTING

If you have a problem, and the problem persists after you have made the checks mentioned, contact your nearest Electrolux approved Service Centre or the dealer you bought the refrigerator from. Be ready to quote the model number, serial number and 8-digit serial number, which is stated on the label inside the refrigerator compartment.

ICE + WATER TROUBLESHOOTING

The ice maker is not making any ice

- See Ice maker section in user manual: turn icemaker on.
- Check water pressure meets minimum and maximum requirement (see install instructions).
- Check water supply hose for kinks.
- Replace the water filter cartridge.
- Open the household water tap.
- Replace the water filter cartridge.
- Turn on the water tap.
- The ice & water filter cartridge may be clogged or restricted by foreign material, and will need to be replaced.
- Replace the water filter cartridge.
- Check water pressure meets minimum and maximum requirement (see install instructions).

Automatic icemaker

The ice & water filter cartridge may be clogged or restricted by foreign material, and will need to be replaced.

The icemaker is not making enough ice

- The ice maker should produce approximately 0.5-1 kilogram of ice every 24 hours.
- Check icemaker section in user manual: turn icemaker on.
- Check and/or change filter.

Ice cubes are too small or too big

- Replace the filter cartridge, as the water filter cartridge may be clogged.
- Check water supply hose for kinks.
- Check water pressure meets minimum and maximum requirement (see install instructions).

The ice has a bad odour and taste

- Cover foods tightly. Discard stale ice. The ice maker will produce a fresh supply.
- Add or replace water filter to water supply. Consult a water purifying company.
- Discard stale ice monthly.

IF YOU STILL REQUIRE SERVICE

Before calling for service, please ensure that the steps listed in clause 13 above have been followed.

1. In this warranty:
   (a) ‘acceptable quality’ as referred to in clause 10 of this warranty has the same meaning referred to in the ACL;
   (b) ‘ACL’ means Schedule 2 to the Competition and Consumer Act 2010;
   (c) ‘Appliance’ means any Electrolux product purchased by you and accompanied by this document;
   (d) ‘ASC’ means Electrolux authorised service centres;
   (e) ‘Electrolux’ means Electrolux Home Products Pty Ltd of 163 O’Riordan Street, Mascot NSW 2020, ABN 51 004 782 341 in respect of Appliances purchased in Australia and Electrolux (NZ) Limited (collectively, ‘Electrolux’) of 5-5 Tullahs Road, Mount Wellington, in respect of Appliances purchased in New Zealand;
   (f) ‘major failure’ as referred to in clause 10 of this warranty has the same meaning referred to in the ACL and includes a situation when an Appliance cannot be repaired or it is uneconomic for Electrolux, at its discretion, to repair an Appliance during the Warranty Period;
   (g) ‘Warranty Period’ means the Appliance is warranted against manufacturing defects in Australia and New Zealand for 24 months and for the Appliance’s compressor, condenser, evaporator and drain, an additional 36 months parts only warranty applies, following the date of original purchase of the Appliance.

2. This warranty only applies to Appliances purchased and used in Australia or New Zealand and used in normal domestic applications and is in addition to (and does not exclude, restrict, or modify in any way) any non-excludable statutory warranties in Australia or New Zealand.

3. During the Warranty Period Electrolux or its ASC will, at no extra charge if your Appliance is readily accessible for service, without special equipment and subject to these terms and conditions, repair or replace any parts which it considers to be defective. Electrolux or its ASC may use remanufactured parts to repair your Appliance. You agree that any replaced Appliances or parts become the property of Electrolux.

4. Parts and Appliances not supplied by Electrolux are not covered by this warranty.

5. To the extent permitted by law, you will bear the cost of transportation, travel and delivery of the Appliance to and from Electrolux or its ASC. If you reside outside of the service area, you will bear the cost of:
   (a) travel of an authorised representative;
   (b) transportation and delivery of the Appliance to and from Electrolux or its ASC.

6. In all instances, unless the Appliance is transported by Electrolux or an Electrolux authorised representative, the Appliance is transported at the owner’s cost and risk, while in transit to and from Electrolux or its ASC.

7. You may not make a claim under this warranty unless the defect claimed is due to faulty or defective parts or workmanship. Electrolux is not liable in the following situations (which are not exhaustive):
   (a) the Appliance is damaged by:
      (i) accident;
      (ii) misuse or abuse, including failure to properly maintain or service;
      (iii) normal wear and tear;
      (iv) power surges, electrical storm damage or incorrect power supply;
      (v) incomplete or improper installation;
      (vi) incorrect, improper or inoperative operation;
      (vii) insect or vermin infestation;
   (b) the failure to comply with any additional instructions supplied with the Appliance;
   (c) the Appliance was modified without authority from Electrolux in writing;
   (d) the Appliance’s serial number or warranty seal has been removed or defaced;
   (e) the Appliance was serviced or repaired by anyone other than Electrolux, an authorised repairer or ASC.

8. This warranty, the contract to which it relates and the relationship between you and Electrolux are governed by the law applicable where the Appliance was purchased. Where the Appliance was purchased in New Zealand for commercial purposes the Consumer Guarantee Act does not apply.

9. To the extent permitted by law and subject to your non-excludable statutory rights and warranties, Electrolux excludes all warranties and liabilities (other than as contained in this document) including liability for any loss or damage whether direct or indirect arising from your purchase, use or non-use of the Appliance.

10. For Appliances and services provided by Electrolux in New Zealand, the Appliances come with a guarantee by Electrolux that cannot be excluded under the ACL. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the Appliance repaired or replaced if the Appliance fails to be of acceptable quality and the failure does not amount to a major failure. The benefits to you given by this warranty are in addition to your other rights and remedies under a law in relation to the Appliances or services to which the warranty relates.

11. At all times during the Warranty Period, Electrolux shall, at its discretion, determine whether repair, replacement or refund will apply if an Appliance has a valid warranty claim applicable to it.

12. For Appliances and services provided by Electrolux in New Zealand, the Appliances come with a guarantee by Electrolux pursuant to the provisions of the Consumer Guarantees Act, the Sale of Goods Act and the Fair Trading Act.

13. To enquire about claiming under this warranty, please follow these steps:
   (a) carefully check the operating instructions, user manual and the terms of this warranty;
   (b) have the model and serial number of the Appliance available;
   (c) have the proof of purchase (e.g. an invoice) available;
   (d) telephone the numbers shown below.

14. You accept that if you make a warranty claim, Electrolux and its ASC may exchange information in relation to you to enable Electrolux to meet its obligations under this warranty.
