

# ULX110 Universal Laundry Pedestal with Locking Drawer

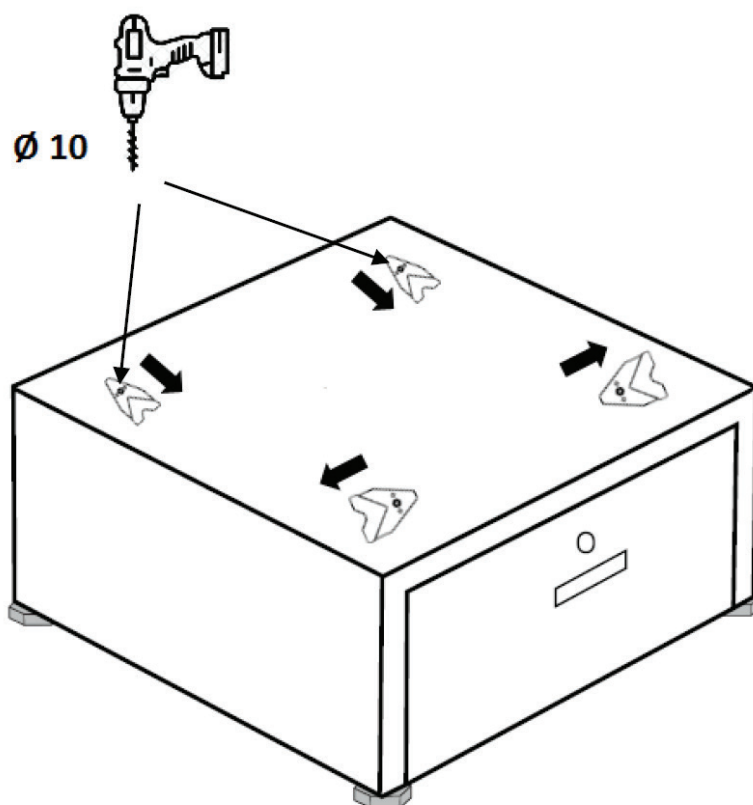

## Installation Instructions

### How to install short cabinet appliances on Unilux Universal Pedestal

To install short cabinet appliances on ULX110, 2 extra Ø10 holes are required for rear feet brackets on the pedestal. Please follow instructions below:

1. Follow all instructions in ULX110 installation instruction up to step 7 but in step 5 assemble front feet brackets only.
2. After lifting the appliance onto the pedestal, push the appliance and the brackets as far back as possible as long as the brackets are able to slide over the front feet. For stability reasons we recommend to place the appliance as close to the centre of the Pedestal as much as possible. The diagram below shows the best bracket orientation to achieve this. Depending on the size of the appliance a typical distance from the front of the appliance to the edge of the pedestal would be between 70 to 100mm.
3. Tighten the front brackets bolts as tight as possible once the ideal position is achieved.
4. From the back push appliance as much forward as possible making sure appliance front feet are locked in under the brackets.
5. Position the rear feet brackets directly from behind each foot as indicated on the diagram below, then use a marker to mark the position in the centre of existing holes on the brackets.
6. Remove the brackets and drill 2 Ø10 holes on the pedestal. Note: you may need to move the appliance slightly to give you enough clearance to drill the holes. If so repeat step 4.
7. Position both brackets behind rear feet and line up the hole on the pedestal and the bracket, then use the included washers and bolts to tighten brackets as tight as possible.
8. The appliance should now be properly secured on the pedestal. You can now continue with step 8 and 9 of pedestal installation instructions.
